

GATOR PATCH

For Repairing Asphalt
Petroleum Based Driveway

Designed especially for “Alligator Cracked” asphalt. Less costly than hot mix skin patching.

Application: Mix, pour on, and work in with squeegees. Prime old, oxidized surfaces with Tack Cote cut with water (1 part Tack Cote and 6 parts water).

Fill depressions over ¼” deep in multiple applications of no more than ¼” at a time, allowing each coat to dry thoroughly.

Coverage: Approximately 20-50 sq. ft. per gallon at ¼” depth.
Approximately 150 linear feet per gallon for cracks ½” x ½”.

GATOR PATCH is a ready-to-use blend of asphalt emulsion, mineral fillers, glass fiber, ground rubber and plasticizer. It is very durable for parking lots, driveways, play grounds, walkways, running tracks, tennis courts, etc. In addition to alligator cracked areas, it can also be used to fill shallow depressions or to fill cracks in excess of ½” wide in asphalt surfaces.
